TECH SKILLS

- **Version Control:** Git, GitHub
- **Build & CI/CD Tools:** Maven, Jenkins
- **Web & Application Servers:** Apachetomcat, Nginx
- **Scripting & Operating Systems:** Shell Scripting, Bash, Python, Linux,(Ubuntu, CentOS), Windows
- **Cloud Platforms (AWS):** EC2, S3,IAM, VPC, CloudWatch, CloudFront,EKS, RDS, Redis, MSK, Lambda, KMS,SNS & SQS, Secret Manager,DynamoDB
- **Containerization & Orchestration:** Docker, Kubernetes, Helm
- **Infrastructure as Code &Configuration Management:** Terraform, Ansible
- **Artifact Management & Backup:** Nexus, JFrog Artifactory, DockerHub
- **Code Quality & Security:** SonarQube, AWS VPC, Route 53, Security Groups
- **Monitoring & Logging:** ELK Stack, Filebeat, Metricbeat, CloudWatch
- **Collaboration & ProjectManagement:** Confluence, JIRA
- **Databases:** MongoDB

JAGADISH THATIPALLI

CLOUD & DEVOPS ENGINEER | AWS | KUBERNETES | DEVSECOPS | TERRAFORM

PROFILE

DevOps Engineer with 2.5 years of hands-on experience in building, automating, and maintaining scalable cloud infrastructure. Strong expertise in AWS services, CI/CD pipeline implementation using Jenkins and GitHub, containerization with Docker, and orchestration using Kubernetes (EKS). Experienced in Infrastructure as Code using Terraform and configuration management with Ansible. Proven ability to support cloud migrations, optimize deployments, monitor applications, and collaborate with development teams to improve system reliability and release efficiency.

PROFESSIONAL SKILLS

- Strong experience in CI/CD pipeline design and automation using Jenkins, and GitHub.
- Hands-on expertise in AWS cloud services including EC2, S3, IAM, VPC, EKS, RDS, CloudWatch, and Load Balancers.
- Proficient in containerization and orchestration using Docker, Kubernetes, and Helm.
- Solid experience in Infrastructure as Code (IaC) using Terraform for cloud resource provisioning.
- Skilled in configuration management and automation with Ansible.
- Experience in monitoring and logging using ELK Stack and AWS CloudWatch.
- Knowledge of Kafka (MSK) for real-time data streaming in IoT-based applications.
- Strong understanding of Linux systems, shell scripting, and system troubleshooting.
- Experience with version control systems like Git and GitHub, including branching and release strategies.
- Ability to debug production issues related to Kubernetes, networking, CI/CD failures, and cloud infrastructure.
- Experience working in Agile/DevOps environments, collaborating with development and QA teams.
- Good understanding of security best practices including IAM roles, policies, secrets management, and least privilege access.
- Ability to optimize cloud costs through resource monitoring and right-sizing.
- Strong documentation, communication, and cross-team collaboration skills.

EDUCATION

- **College Name:**Kakatiya Institute of Technology and Science Warangal (KITSW)
- **Graduation:**2019-2023

PROFESSIONAL EXPERIENCE

- **CompanyName:** LTIMindtree
- **Project Name:** CVCP (Connected Vehicle Cloud Platform)
- **Role:** DevOps Engineer
- **Tools & Technologies:** AWS, Jenkins, GitHub, Maven, Docker, Kubernetes, Helm, Terraform, Ansible, ELK, Kafka, MongoDB, Redis, Nginx, Linux, Bash

DEC 2023

Project Description:

CVCP (Connected Vehicle Cloud Platform) is a large-scale IoT platform designed to collect, process, and analyze real-time vehicle data such as GPS location, vehicle health, diagnostics, and driver behavior. The platform supports millions of connected vehicles and enables real-time analytics, alerts, dashboards, and integrations with downstream applications for fleet management and automotive services.

Roles & Responsibilities:

- Designed and maintained CI/CD pipelines using Jenkins for automated build, test, and deployment of microservices.
- Containerized applications using Docker and managed deployments on Kubernetes (EKS).
- Created and managed AWS infrastructure using Terraform, including VPCs, EKS clusters, EC2, IAM roles, security groups, and RDS.
- Implemented Helm charts for standardized and repeatable Kubernetes deployments across environments.
- Automated server configuration and application setup using Ansible playbooks.
- Managed GitHub repositories, branch strategies, and release tagging for multiple microservices.
- Integrated Kafka (MSK) for real-time vehicle data streaming and ensured reliable message processing.
- Configured ELK Stack for centralized logging and monitored application and infrastructure health.
- Set up CloudWatch alarms and dashboards for proactive monitoring and incident response.
- Troubleshoot Kubernetes issues related to pods, services, ingress, networking, and autoscaling.
- Supported application migrations from on-premise to AWS cloud with minimal downtime.
- Worked closely with development, QA, and operations teams to improve release frequency and system stability.
- Optimized AWS costs by right-sizing resources and monitoring EKS, RDS, and EC2 usage.
- Containerized applications using Docker with optimized and secure Dockerfiles.
- Deployed and managed microservices on Amazon EKS, handling deployments, services, ingress, namespaces, and config maps.
- Developed and maintained Helm charts for consistent and version-controlled Kubernetes deployments.
- Provisioned and managed AWS infrastructure using Terraform, including VPCs, subnets, EKS clusters, EC2, IAM roles, and security groups.
- Automated configuration management and environment setup using Ansible playbooks.
- Implemented rolling updates, blue-green, and canary deployments to reduce downtime.
- Configured auto-scaling (HPA and ASG) to handle high-volume IoT traffic.
- Integrated Apache Kafka (MSK) for real-time vehicle telemetry and event processing.
- Set up centralized logging using ELK Stack and ensured effective log indexing and retention.
- Created CloudWatch dashboards and alarms for proactive monitoring and alerting.
- Managed secrets and sensitive data using AWS Secrets Manager and Kubernetes Secrets.
- Implemented security best practices, including IAM least-privilege access and Kubernetes RBAC.
- Supported application migrations from on-premise to AWS cloud with minimal downtime.
- Optimized AWS costs by monitoring and right-sizing EKS, EC2, RDS, and storage resources.
- Collaborated with development and QA teams to improve release stability and deployment frequency.
- Maintained environment consistency across Dev, QA, UAT, and Production.
- Performed root cause analysis (RCA) and documented incident resolutions.
- Managed Git branching, tagging, and release processes.
- Created and maintained technical documentation in Confluence.

INTERNSHIP

- **CompanyName:** LTIMindtree
- **Project Name:** CloudFleet – Scalable Vehicle Tracking System (IoT)
- **Role:** DevOps Intern
- **Duration:** 6 Months
- **Tools & Environment:** GitHub, Docker, Ansible, Maven, Kubernetes, Jenkins, Terraform, AWS Cloud, Helm, ELK, MongoDB

MAY 2023 - NOV 2023

Project Summary:

Developed and deployed an IoT-based vehicle tracking platform. The system collects, processes, and visualizes vehicle data in real-time using cloud-native solutions.

Roles & Responsibilities:

- Designed a CI/CD pipeline with Jenkins for Dockerized microservices.
- Deployed services to Kubernetes using Helm on AWS EKS.
- Used Terraform to create and manage cloud infrastructure.
- Configured Ansible for provisioning EC2 instances.
- Integrated MongoDB, Kafka, and Redis for backend services.
- Enabled observability with Filebeat, Metricbeat, and ELK.
- Optimized infrastructure cost and security using AWS best practices.
- Built end-to-end CI/CD pipelines using GitHub, Docker, and Maven.
- Containerized Java Spring Boot applications and deployed to EKS (AWSKubernetes).
- Provisioned and managed AWS infrastructure using Terraform.
- Automated OS-level configurations using Ansible playbooks.
- Integrated SonarQube and Nexus for code quality and artifact storage.
- Monitored logs and metrics using ELK Stack and CloudWatch.
- Worked in an Agile team using JIRA and documented procedures in Confluence.

CERTIFICATIONS

- Microsoft Certified: Azure Administrator Associate (AZ-104)
- Hands-on experience with Azure Virtual Machines, VNets, Storage Accounts, Azure AD, RBAC, Monitoring, and Security
- Skilled in Azure resource management, backup & recovery, and identity access control
